

# Wildlife Friendly Gardening Tips

## Water

Add a shallow dish with pebbles, a sink wildlife water feature or a small pond to provide drinking and bathing water for birds, bees, hedgehogs and other wildlife.

## Food

Plant native wildflowers, flowers and plants and berry-bearing shrubs to provide natural food sources throughout the year and help biodiversity.

## Shelter

Leave log piles, long grass areas, and dense hedging to give wildlife safe places to nest and hibernate. Put up bird boxes and bee hotels.

## Sustainable

Avoid pesticides and choose peat-free compost to protect the wider ecosystem while nurturing your garden. Collect rainwater to water your garden.

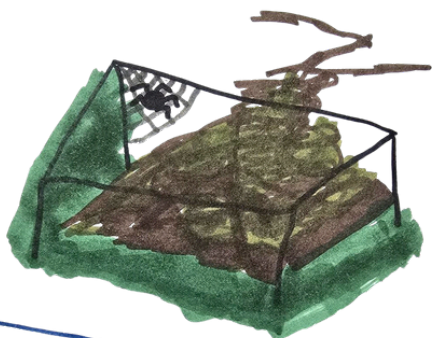

## Connect

Join local wildlife groups and share your garden sightings and tips to help build a connected habitat network across your local area.

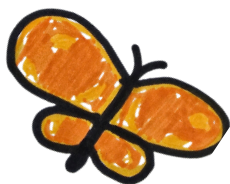

This is a bird house. In the spring the birds come to eat and build homes or you could help them by giving them homes.

We made a bug hotel because it would make the environment better by giving insects homes.
